AEROCUT X

BY MBM CORPORATION

X FEATURES:

- *Increased speeds*
- *7" color touch screen*
- *Expandable feed tray*
 - *Barcode reader*
- *Lytrod Intellicut software*
 - *Perforation unit*
 - *Ultrasonic sensor*
- *Patented Tri-suction feeding*
- *Ejection pause function*
- *Easy maintenance*

Innovation at the highest level of precision and finishing quality.

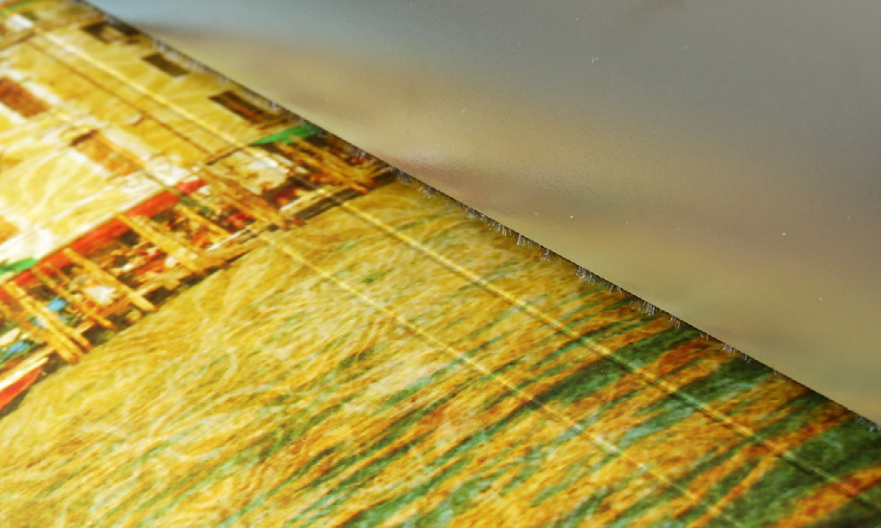

Extreme stable feeding.

Feeding is an important and essential part for any print finishing device. The AeroCut X has an advanced patented feeding mechanism, that drastically reduces double feeds and mis-feeds, prevents paper jams, and enhances productivity.

Laser-sharp accuracy.

The AeroCut X is designed, built and calibrated with Japanese engineering and craftsmanship at its best. The robust full-metal machine body maintains top level accuracy and finishing quality every time.

True creaser adds value on digital prints.

The AeroCut X is an ideal solution for digital print finishing applications as it allows an operator to change jobs in seconds without the need to connect a PC.

WHAT'S INCLUDED?

•• IN THE ••

AEROCUT

X

Perforating Unit

Aerocut X includes 2 perfin wheels. It enables the machine to perforate sheets along the feeding direction.

Large Color Touch Screen

The 7" color touch screen provides excellent visibility and operability. The newly designed user interface makes it easy for an operator to fine-tune settings according to a print job.

LYTROD Intellicut 1 Year License & LAN connector

The X comes with a PC software that allows operators the ability to impose, format, and add personalized information to documents for fast and efficient finishing on the X. Job programs are sent to the Aerocut through ethernet.

Barcode Reader

Aerocut X can read barcodes printed on the leading edge of prints. Its check function alerts the operator when it detects a mismatch between the print and machine settings. The change function automatically adjusts the machine settings according to the barcode scanned and the job recalled.

**ALSO
INCLUDED**

•• IN THE ••

AEROCUT

X

Ultrasonic Sensor

The ultrasonic sensor precisely checks for double feeds, even if the machine is fed black or colored paper.

Easy Maintenance

The X has detachable rollers, not only making cleaning easy, but it gives better access to components in case of a paper jam. Similarly, each perforation and creasing unit can be removed too.

Ejection Pause Function

The ejection pause function allows the first card to be paused at the machine's eject port. This new feature helps an operator to place the card guide plates exactly where they should be according to the card width.

Expandable Feed Tray

The expandable feed tray can accommodate paper up to 29.5" in length. Most paper printed on today's digital printers can easily be finished on the Aerocut X. This allows the customer to add creative value to new applications.

Patented Feeding Mechanism

The patented Tri-suction Feeding Mechanism does not require complicated double feed adjustments. Just load paper, select the volume of air, and the paper will be fed consistently. It also helps prevent the machine from stopping due to double feed or paper jams.

OPTIONAL FOR AEROCUT X:

- Guillotine Ionizer
- Conveyor Stacker
- Business Card Slitter Unit
- Stacker Wire
- Waste Delivery Conveyor
- Ionizer for Feeding Unit
