

INCLUDED IN AEROCUT X:

Perforating Unit

The Aerocut X includes 2 perfin wheels. It enables the machine to perforate sheets along the feeding direction.

Barcode Reader

Aerocut X can read barcodes printed on the leading edge of prints. Its check function alerts the operator when it detects a mismatch between the print and machine settings. The change function automatically adjusts the machine settings according to the barcode scanned and the job recalled.

LYTROD Intellicut 1 Year License & LAN connector

The Aerocut X comes with a PC software that allows operators the ability to impose, format, and add personalized information to documents for fast and efficient finishing on the X. Job programs are sent to the Aerocut through ethernet.

Large Color Touch Screen

The 7" color touch screen provides excellent visibility and operability. The newly designed user interface makes it easy for an operator to fine-tune settings according to a print job.

Expandable Feed Tray

The expandable feed tray can accommodate paper up to 29.5" in length. Most paper printed on today's digital printers can easily be finished on the Aerocut X. This allows the customer to add creative value to new applications.

Ultrasonic Sensor

The ultrasonic sensor precisely checks for double feeds, even if the machine is fed black or colored paper.

Ejection Pause Function

The ejection pause function allows the first card to be paused at the machine's eject port. This new feature helps an operator to place the card guide plates exactly where they should be according to the card width.

Patented Feeding Mechanism

The patented Tri-suction Feeding Mechanism does not require complicated double feed adjustments. Just load paper, select the volume of air, and the paper will be fed consistently. It also helps prevent the machine from stopping due to double feed or paper jams.

Easy Maintenance

The Aerocut X has detachable rollers, not only making cleaning easy, but it gives better access to components in case of a paper jam. Similarly, each perforation and creasing unit can be removed too.

OPTIONAL IN AEROCUT X:

Guillotine Ionizer

Reduces static electricity. This prevents paper strips from remaining on the blade and causing paper jams or damage to the blade.

Stacker Wire

The stacker wire prevents cards from flipping over when ejected. It ensures perfect stacking of business cards.

Conveyor Stacker

The conveyor stacker aligns ejected cards from the Aerocut X on the belt. It helps an operator to sort and collect the output easily, especially when the items are small and the job is a long run.

Waste Delivery Conveyor

The optional waste delivery conveyor delivers cut strips on a conveyor and puts them into a waste bin. This unit reduces the work for frequent waste disposal.

Business Card Slitter Unit

Allows the machine to slit and cut 25-up full bleed business cards out of a 12.6" x 17.7" sheet.

Ionizer for Feeding Unit

Prevents double-sheet feeds and feeding mistakes.
