

## FLEXO FUTURA PLATE CUTTER

The new Flexo Futura's cutting head features self aligning roller bearings for the smoothest cut ever. The Flexo Futura gives you -

- Large diameter roller thrust bearings on the cutting head for total control of both blade carriers. No flex, side play or hooks.
- Features beveled edge and vertical blade holders that are spring loaded and retractable when not in use.

Designed specifically for cutting flexo printing plates, Keencut's Flexo Futura Plate Cutter takes the onerous task of hand beveling out of your hands minimizing the risk of injury from re-makes and bad cuts.

Moreover, this machine offers your shop incredible cost savings simply by eliminating manual errors. Improper hand-cut bevels can result in gaps between splices, costing you the time of filling and taping them and creating stress points that can release during a press run. The costly end result: a plate lifting off the printing cylinder and destroying itself.

With the Flexo Futura Plate Cutter, you can enjoy seamless splices, safety and savings.

Flexo Futura Plate Cutter Includes:

- Cutting mat
- Medium-duty blades (100)

### Easy, Precise and Smooth

Cutting head is mounted on roller bearings running on steel tracks.

20 year warranty on the bearings.

Easy to change blade cartridges for switching between cutting materials in seconds.

Ergonomically designed cutting head makes it easy to use over long periods - comfortable for left or right-handed users.

The cutting head has two blade holders, a vertical cutter on the right hand side and a bevel cutter on the left.

New high performance slideway and head system uses Foster Keencut's SteelTrak technology.

Beveled edge and vertical blade holders are spring loaded and retractable when not in use.

Cutting head is mounted on roller bearings running on steel tracks.
