- **Resinous roller including carbon** for electrostatic prevention
- **PTFE-coated heat blade** that cuts the wrapping film (PVC or polyolefin) without fumes
- **Electronic thermostatic** for maintaining temperature settings
- **PTFE-coated heat plate**

More Details:

Our U-450 and WU-550 hand wrappers are used for packaging food to preserve the freshness and appearance while extending shelf life. Unit is constructed of stainless steel for cleanliness and ease of maintenance. The hand wrapper is equipped with an electric heat blade to cut the wrapping film without fumes. The heated PTFE plate provides a tight seal.

Easy to Operate: Plug in power supply and push the main switch to "ON." The pilot lamp will light up. Wait several minutes for the blade and plate to warm-up. Use the thermostat to control the temperature of the heat plate. Put the package on the work table, draw the film, and wrap the package with film extending to the bottom. Pull the film forward and cut using the heat blade by pushing down. Press cut film against bottom of the package. Fold down the edges of the film by hand and press the entire package bottom against the heat plate.

To order stretch wrapping film, refer to our part #SF-15-5000 (15") and SF-18-5000 (18").

Specifications:
