FT-10 Foil Fuser

Foil fusing is a well proven process used to apply foil to toner image areas that have been imprinted with either a laser printer or a copy machine.

The FT-10 is a hand fed fuser designed for limited production applications. FT-10 features include 12.6" wide maximum paper width, manual impression control, foil unwind and rewind tension adjustment, electronic speed and temperature range controls.

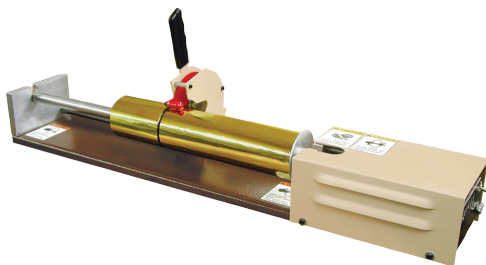

The FT-10 can support a single 500' foil roll wound on a standard 1" core.

Using THERM-O-TYPE foil fusing equipment and supplies, flat foil jobs can be produced without the need to purchase a foil stamping die or expensive foil stamping equipment.

For additional information on foil fusing capabilities and limitations, please review the "Foil Fusing Q & A" section on the THERM-O-TYPE web site.

For fusing foil color selection and pricing go to Foil-Tech Supplies. THERM-O-TYPE foils and films are affordable and ready for shipment.

Special order foils in pigment and metallic colors as well as holographic patterns are available. All rolls use 1" diameter cores.

THERM-O-TYPE manufactures an affordable, electric foil cutter that is designed to cut rolls up to 25" wide by 1,500' long mounted on a 1" core. To minimize foil cost and waste, we recommend that customers purchase a foil cutter and buy their foil in master rolls.
